Facing Tools

- The York facing tools are designed to machine surfaces 90 degrees to the bore. The facing tool attaches to our boring bar. Two tool ports are set in the facing tool; one at 45 degrees and the other at 90 degrees. Each revolution of the bar actuates a gear driven lead screw that advances the cutting tool .005” (.127 mm).

Part Number: FT-1100 Max 10” (254 mm)
  Use with 2” boring bar
Part Number: FT-2100 Max 10” (254 mm)

  Use with 2” or 2-1/4” boring bar

Off-Set Drive (An SPR York Exclusive!)

- Our offset drive feature allows more flexibility than thru-bar designs. The York line-boring machine is an excellent choice for working in constricted areas, as the drive-line allows 30 degrees offset in any direction from the boring bar alignment.

Part Number: OFF-000

Carbide Insert Tool Package 1/2” (12 mm)

- The York insert tool places the carbide cutting surface into the center of the bore, substantially improving cutting tool performance while extending tool holder life. Our tool holders use standard inserts that are readily available from most cutting tool suppliers. Insert tooling takes the guesswork out of tool geometry and improves the overall performance of your line boring machine.

Part Number: ITK-000
Ripper Shank Repair Kit
• A unique option that saves having to pull the tracks to repair worn bores on D-9 to D-10 Cat
  (*Call us for kits to repair other models)
Part Number: RIP-000

Thru-Bar Measuring Kits
• Our thru-bar measuring tool allows you to accurately measure the bore without removing the bar. The measuring tool is placed into an adjacent tool port and traversed into the bore. By loosening the setscrew, the spring loaded measuring tool snaps open - capturing the size of the bore. Tighten the setscrew and traverse the tool from the bore. Pull the measuring tool out of the bar. Using a micrometer, measure the thru-bar tool for the diameter of the bore.
